

**Table 14.3 Postoperative destination by risk status – Female patients**

|   | Low-risk patients by at end of surgery evaluation |                                      | High-risk patients by end of surgery evaluation |                                      |
|---|---|--------------------------------------|---|--------------------------------------|
| Destination   | Number (%) – Female patients                      | Mortality rate (%) – Female patients | Number (%) – Female patients                    | Mortality rate (%) – Female patients |
| Ward  | 3,216 (58.8)                                      | 0.44                                 | 1,168 (17.9)                                    | 4.5                                  |
| Enhanced care area on a normal ward                       | 323 (5.9)   | 0.00                                 | 156 (2.4)                                       | 6.4                                  |
| Extended recovery area within theatres (e.g. PACU or OIR) | 324 (6)   | 0.31                                 | 221 (3.4)                                       | 4.98                                 |
| Critical care (includes Level 2 HDU or Level 3 ICU)       | 1,608 (29.4)                                      | 1.37                                 | 4,974 (76.3)                                    | 16.7                                 |
| Total   | 5,471   | 0.68                                 | 6,519   | 13.88                                |

Excludes patients who died in theatre and who are on an end-of-life pathway.

**Table 14.4 Postoperative destination by risk status – Male patients**

|   | Low-risk patients by at end of surgery evaluation |                                    | High-risk patients by end of surgery evaluation |                                    |
|---|---|------------------------------------|---|------------------------------------|
| Destination   | Number (%) – Male patients                        | Mortality rate (%) – Male patients | Number (%) – Male patients                      | Mortality rate (%) – Male patients |
| Ward  | 3,116 (57.5)                                      | 0.39                               | 925 (15.8)                                      | 4.8                                |
| Enhanced care area on a normal ward                       | 318 (5.9)   | 1.26                               | 128 (2.2)                                       | 4.7                                |
| Extended recovery area within theatres (e.g. PACU or OIR) | 296 (5.5)   | 0.34                               | 177 (3.0)                                       | 6.2                                |
| Critical care (includes Level 2 HDU or Level 3 ICU)       | 1,685 (31.1)                                      | 1.13                               | 4,641 (79.0)                                    | 16.4                               |
| Total   | 5,415   | 0.66                               | 5,871   | 14.0                               |

Excludes patients who died in theatre and who are on an end-of-life pathway.
